BioBased Technologies® Selects Archway Sales as U.S. Distributor for Agrol®

SPRINGDALE, Arkansas (Jan. 15, 2010) – BioBased Technologies® has chosen Archway Sales to be the authorized distributor for Agrol® in the United States.

BioBased Technologies® is focused on developing and marketing sustainable solutions for the manufacturing and construction industries. Products offered by BioBased Technologies® include Agrol®, bio-based polyols; and BioBased Insulation®, soy-based spray polyurethane foam insulation available from a network of certified dealers.

“We believe that Archway’s historical knowledge and technical expertise within the polyurethane industry will be a great fit with the technically advanced renewable polyol products provided by BioBased Technologies®”, said Shelly West, sales manager for the company’s Polyol Division.

Agrol® polyols serve as a sustainable alternative to the petroleum-based polyols that are broadly used in the polyurethane industry. The Agrol® product line is derived from vegetable oils for use in the production of a wide variety of products including coating, adhesives, sealants and elastomers, flexible molded foam, rigid molded foam, slabstock foam and spray foam insulation.

Agrol® is a 2006 P2 awardee by the United States Environmental Protection Agency.

BioBased Technologies®, LLC began operations in February 2003, headquartered in Spring Valley, Illinois, with a vision to develop a family of bio-based polyols from renewable plants that could be offered as an alternative to non-renewable petroleum-based polyols. In July 2005, the company was relocated to Northwest Arkansas.
